

2019 Flu Vaccinations

As the protection given by Flu injections wears off after 3 to 4 months it is important to be vaccinated each year to continue to be protected. Flu strains (types) also change over time.

In 2019 the age specific influenza vaccinations at Grantham House will be available around May (the Health Department recommend May as the best month to be vaccinated against the Flu).

More specific details on availability will be provided when known.
